

HOMOGAMOUS

Meaning: Homogamous refers to a reproductive system in which an organism is capable of self-fertilization, often involving self-compatible flowers.

1. The species is considered homogamous because it produces flowers that are self-compatible.
2. In its homogamous breeding system, the plant relies on its own pollen for fertilization.
3. Researchers found that homogamous populations tend to have lower genetic diversity.
4. Many homogamous organisms thrive in environments where cross-pollination is rare.
5. The study focused on the ecology of homogamous species in isolated habitats.
