

HOMOGENETIC

Meaning: Homogenetic refers to having a uniform or similar genetic composition or characteristics, often used to describe populations or languages that exhibit consistent traits or structures.

1. The scientist proposed a theory on the homogenic nature of the cell populations in the study.
2. In linguistic terms, homogenic languages often share similar syntactic structures across dialects.
3. The homogenic traits in the species allowed researchers to predict their evolutionary patterns more accurately.
4. During the experiment, the homogenic characteristics of the samples ensured consistent results throughout.
5. The artist aimed to create a homogenic blend of colors that would convey a sense of unity in the painting.
