

HOROPTER

Meaning: Horopter: the theoretical curve in space where objects are seen as single images by both eyes, crucial for understanding depth perception in binocular vision.

1. The horopter is an important concept in the study of binocular vision.
2. Understanding the horopter can help explain how we perceive depth and distance.
3. In experimental psychology, researchers often use the horopter to investigate visual perception.
4. The shape of the horopter can vary depending on the individual's eye anatomy.
5. Artists may consider the horopter when creating realistic three-dimensional representations.
