

HUD

Meaning: HUD (heads-up display): a transparent display that presents data such as navigation and speed information directly in the user's line of sight, typically projected onto a windshield or visor.

1. The new car model features an advanced HUD that displays navigation and speed information directly on the windshield.
2. Pilots rely on a heads-up display to keep critical flight data in their line of sight without looking down at instruments.
3. With the HUD's augmented reality capabilities, players can see game stats and objectives superimposed over the real world.
4. The engineer explained how the HUD can enhance situational awareness for drivers in high-speed environments.
5. As technology evolves, the use of HUDs is becoming more common in both consumer electronics and military applications.
