

HUMECTANT

Meaning: A humectant is a substance that helps to retain moisture in the skin or other materials, enhancing hydration and texture.

1. A humectant helps to retain moisture in the skin, making it feel plump and hydrated.
2. Many cosmetics contain humectants to improve their texture and moisturizing properties.
3. Glycerin is a popular humectant that draws water from the environment into the skin.
4. The effectiveness of a humectant can vary depending on the humidity levels in the air.
5. In addition to skincare, humectants are also used in food products to prevent dryness.
