

HYBRIDIZATION

Meaning: Hybridization is the process of combining different species, varieties, or cultural elements to create new forms or traits.

1. Hybridization in plants often leads to increased resistance to diseases and pests.
2. The hybridization of different cultures can result in a rich tapestry of shared traditions.
3. Through hybridization, scientists are able to create new strains of bacteria that can degrade plastics.
4. The concept of hybridization extends beyond biology into art and music, where diverse influences merge.
5. In linguistics, hybridization occurs when elements from different languages blend to form new expressions.
