

HYDROCEPHALIC

Meaning: Hydrocephalic refers to a medical condition characterized by an abnormal accumulation of cerebrospinal fluid in the brain, often leading to increased intracranial pressure and potential developmental issues.

1. The hydrocephalic child required immediate medical intervention to alleviate the pressure on her brain.
2. Doctors noted that the hydrocephalic condition could lead to various developmental delays if not treated early.
3. Research into hydrocephalic disorders has improved significantly, providing better outcomes for affected individuals.
4. Parents of hydrocephalic children often seek support groups to share experiences and coping strategies.
5. The symptoms of hydrocephalic conditions can vary widely, making early diagnosis crucial for effective treatment.
