

HYDROKINETIC

Meaning: Hydrokinetic refers to the energy derived from the movement of water, particularly in rivers or tides, used for generating power.

1. The hydrokinetic energy generated by the river's flow could power local communities.
2. Researchers are exploring hydrokinetic turbines as a sustainable alternative to traditional energy sources.
3. The design of hydrokinetic devices must account for varying water velocities to maximize efficiency.
4. As hydrokinetic technology advances, it holds the potential to significantly reduce carbon emissions.
5. Many coastal regions are investing in hydrokinetic projects to harness the energy of ocean currents.
