

# HYDROLOGICAL

*Meaning: Hydrological refers to the science concerned with the properties and movement of water in the Earth's atmosphere and on its surface, particularly in relation to the water cycle and its effects on ecosystems and environments.*

1. The hydrological cycle is essential for maintaining Earth's ecosystems.
2. Researchers are studying the hydrological impacts of climate change on river systems.
3. Effective hydrological management can prevent flooding and conserve water resources.
4. Hydrological models help predict water availability in agricultural regions.
5. Understanding hydrological processes is crucial for sustainable urban planning.
