

HYDROMETER

Meaning: A hydrometer is an instrument used to measure the specific gravity or density of liquids, often to assess their composition or potential alcohol content.

1. A hydrometer is used to measure the specific gravity of liquids.
2. In winemaking, a hydrometer helps determine the potential alcohol content of the must.
3. The laboratory technician carefully calibrated the hydrometer before taking measurements.
4. By floating a hydrometer in a solution, you can assess its density compared to water.
5. Many homebrewers rely on a hydrometer to ensure their fermentation process is on track.
