

HYDROMETROGRAPH

Meaning: A hydrometrograph is an instrument that measures and records changes in water levels and flow, often in relation to rainfall or other environmental conditions.

1. The hydrometrograph recorded the fluctuations in water levels throughout the storm.
2. Researchers installed a hydrometrograph to study the effects of rainfall on river flow.
3. An accurate hydrometrograph is essential for monitoring potential flooding in low-lying areas.
4. The data from the hydrometrograph provided valuable insights into seasonal water patterns.
5. Engineers relied on the hydrometrograph to ensure the dam was operating within safe limits.
