

HYDROSULPHIDE

Meaning: Hydrosulphide is a chemical compound containing the hydrosulfide ion (HS⁻), commonly used in industrial processes and chemical reactions, particularly for metal extraction from ores.

1. The laboratory conducted experiments to analyze the properties of hydrosulphide in various chemical reactions.
2. Hydrosulphide is often used in industrial processes to extract metals from ores.
3. The presence of hydrosulphide in the water supply raised concerns about its environmental impact.
4. During the synthesis, the team carefully controlled the concentration of hydrosulphide to ensure safety.
5. Researchers discovered that hydrosulphide can act as a reducing agent in organic chemistry.
