

INCINERATION

Meaning: Incineration is the process of burning waste materials to reduce their volume and generate energy.

1. Incineration is often considered a viable method for reducing waste volume and minimizing landfill usage.
2. The process of incineration can generate energy, making it a dual-purpose solution for waste management.
3. Many communities have implemented incineration facilities to handle hazardous materials safely and efficiently.
4. Concerns about air quality and emissions have led to stricter regulations on incineration practices.
5. Advocates argue that incineration can be part of a sustainable waste management strategy when combined with recycling efforts.
