

INFESTIVITY

Meaning: Infestivity refers to the degree or rate at which a species invades and establishes itself in a particular environment, often causing disruption to the local ecosystem.

1. The infestivity of the invasive species has drastically altered the local ecosystem.
2. Researchers are studying the infestivity rates of the pest to develop better control measures.
3. High infestivity in agricultural fields can lead to significant crop losses if not managed promptly.
4. The infestation's infestivity prompted the government to issue a warning to nearby residents.
5. Monitoring the infestivity of pathogens is crucial for preventing widespread outbreaks.
