

INFILTRATIVE

Meaning: Infiltrative refers to the characteristic of spreading or penetrating into surrounding tissues or structures, often used in a medical context to describe diseases or tumors that invade adjacent areas.

1. The infiltrative nature of the disease complicated the diagnosis and treatment plan.
2. Researchers studied the infiltrative growth patterns of the tumor to better understand its behavior.
3. Her infiltrative approach allowed her to gather sensitive information without raising suspicion.
4. The infiltrative cells spread throughout the tissue, making surgical removal challenging.
5. Infiltrative processes in the environment can lead to significant changes in local ecosystems.
