

INFUSORIAN

Meaning: Infusorian: a microscopic aquatic organism, often a protozoan, that lives in water and is typically studied for its behavior and characteristics.

1. An infusorian is a type of microscopic organism that thrives in aquatic environments.
2. During the experiment, we observed the behavior of several infusorians under different light conditions.
3. Researchers often study infusorians to understand the dynamics of freshwater ecosystems.
4. The infusorian's unique feeding mechanisms allow it to efficiently capture small particles in the water.
5. In a drop of pond water, one can often find a diverse community of infusorians, each playing a vital role in the food web.
