

INTENERATION

Meaning: Inteneration is the process of softening or making a tissue more pliable, often to facilitate surgical procedures or enhance observation in research.

1. The inteneration of the tissue was crucial for the success of the surgical procedure.
2. Through careful inteneration, the researchers were able to observe the cellular responses more clearly.
3. The artist used inteneration techniques to soften the harsh lines in her sculpture.
4. After the inteneration process, the clay became pliable enough for intricate detailing.
5. The inteneration of aging wood can restore its former beauty and extend its lifespan.
