

INTERFACIAL

Meaning: Interfacial refers to the characteristics or phenomena occurring at the boundary between two different phases, such as liquid-liquid or solid-liquid interfaces.

1. Interfacial tension plays a crucial role in the stability of emulsions.
2. The researchers investigated the interfacial properties of different polymer blends.
3. Understanding interfacial dynamics can enhance the performance of chemical reactors.
4. The interfacial region between the two materials was meticulously studied for its adhesive properties.
5. An increase in temperature can significantly alter the interfacial interactions within the solution.
