

INTERLAMINATED

Meaning: Interlaminated refers to layers of materials that are bonded together, enhancing structural integrity and performance in composite applications.

1. The interlaminated layers of the composite material enhance its overall strength and durability.
2. Researchers studied the interlaminated structure to improve the performance of flexible electronics.
3. In the manufacturing process, the interlaminated sheets are bonded together using advanced adhesives.
4. The interlaminated design allows for better thermal insulation in building materials.
5. During the testing phase, the interlaminated sections showed remarkable resistance to wear and tear.
