

INTERNODIAL

Meaning: Internodal refers to the distance between successive nodes on a plant stem, which affects its growth and structural characteristics.

1. The internodal spacing of the plant influences its overall growth and structure.
2. Botanists often study internodal length to understand plant adaptation to various environments.
3. During the experiment, we measured the internodal segments to track the plant's development.
4. The internodal regions of the stem can vary significantly between different species.
5. Understanding internodal characteristics helps in breeding programs for improved crop yield.
