

INTROSUSCEPTION

Meaning: Intussusception is a medical condition in which a portion of the intestine telescopes into an adjacent segment, potentially leading to obstruction and requiring urgent treatment.

1. Intussusception is a serious medical condition that requires prompt treatment.
2. The doctor explained that intussusception occurs when one segment of the intestine folds into another.
3. Symptoms of intussusception can include severe abdominal pain and vomiting.
4. In children, intussusception is often caused by a viral infection that leads to swelling of the lymph nodes.
5. An ultrasound is frequently used to diagnose intussusception in pediatric patients.
