

INTUBATION

Meaning: Intubation is the medical procedure of inserting a tube into a patient's airway to assist with breathing.

1. Intubation is often necessary for patients who cannot breathe on their own.
2. The anesthesiologist performed the intubation smoothly before the surgery began.
3. Complications from intubation can include injury to the vocal cords or airway.
4. In emergency situations, rapid intubation can be critical for patient survival.
5. Training in intubation techniques is essential for all healthcare professionals in critical care.
