

IRIDECTOMY

Meaning: Iridectomy is a surgical procedure that involves the removal of a portion of the iris to relieve intraocular pressure or improve vision.

1. Iridectomy is often performed to alleviate pressure in patients with glaucoma.
2. The surgeon explained that an iridectomy might be necessary to improve the patient's vision.
3. After the iridectomy, the patient was advised to avoid strenuous activities for several weeks.
4. Complications from an iridectomy can include bleeding and infection if proper care is not taken.
5. In some cases, an iridectomy is done as part of a larger surgical procedure on the eye.
