

# ISOTRIMORPHOUS

*Meaning: Isotrimorphous refers to the property of a substance that can crystallize in different forms while retaining the same chemical composition.*

1. The mineral's isotrimorphous nature allows it to crystallize in multiple forms while maintaining the same chemical composition.
2. Researchers discovered that certain compounds exhibit isotrimorphous structures, challenging previous assumptions about molecular arrangements.
3. In crystallography, isotrimorphous substances demonstrate how different environmental conditions affect crystal growth and morphology.
4. The isotrimorphous relationship between the two minerals highlights the complexity of their respective lattices.
5. Understanding isotrimorphous patterns can lead to advancements in material science and engineering applications.
