

JEWELWEED

Meaning: Jewelweed is a flowering plant of the genus Impatiens, commonly found in moist, shaded areas, known for its bright orange flowers that attract pollinators.

1. Jewelweeds thrive in moist, shaded areas, often found near streams and ponds.
2. The bright orange flowers of the jewelweed attract hummingbirds and other pollinators.
3. When crushed, the leaves of the jewelweed can provide relief from poison ivy rashes.
4. In the garden, jewelweed serves not only as a beautiful plant but also as a natural remedy.
5. Many hikers learn to identify jewelweed as a helpful companion in the wilderness.
