

# KOALA

*Meaning: A koala is a tree-dwelling marsupial native to Australia, known for its distinctive furry appearance and diet primarily consisting of eucalyptus leaves.*

1. The koala is often mistaken for a bear due to its furry appearance.
2. In the wild, koalas primarily feed on eucalyptus leaves, which are toxic to most other animals.
3. Conservation efforts are underway to protect the dwindling koala population from habitat loss.
4. Visitors to Australia often seek the chance to see a koala up close in its natural habitat.
5. Koalas spend most of their lives in trees, resting for up to 20 hours a day.
