

LACTONIC

Meaning: Lactonic refers to a chemical form of a compound characterized by the presence of a lactone, typically exhibiting unique properties and serving as intermediates in biochemical processes.

1. The lactonic form of the compound displayed unique properties that intrigued the researchers.
2. In biochemistry, lactonic compounds often serve as intermediates in various metabolic pathways.
3. The aroma of the wine was distinctly lactonic, evoking notes of butter and cream.
4. She explained how the lactonic structure contributed to the stability of the molecule.
5. His passion for organic chemistry led him to explore the synthesis of lactonic esters.
6. The lactonic compound exhibited unique properties that intrigued the researchers.
7. In the context of organic chemistry, lactonic structures play a crucial role in various reactions.
8. She described the flavor profile of the cheese as subtly lactonic, with hints of cream and butter.
9. The study focused on the synthesis of new lactonic molecules for potential pharmaceutical applications.
10. His innovative approach to flavor development included the incorporation of lactonic elements to enhance richness.
