

LAMELLIFEROUS

Meaning: Lamelliferous: having a structure composed of thin, plate-like layers, often used for filtering or processing substances such as nutrients or water.

1. The lamelliferous structure of the organism allows it to efficiently filter nutrients from the water.
2. Researchers discovered a new species with a unique lamelliferous shell that aids in its survival.
3. In paleontology, lamelliferous fossils provide insight into ancient marine ecosystems.
4. The study of lamelliferous animals has revealed their adaptive strategies in various environments.
5. Herpetologists noted that the lamelliferous characteristics of the amphibian's skin play a role in moisture retention.
