

LAMINABILITY

Meaning: Laminability refers to the capability of a material to be easily layered or bonded together in thin sheets or layers for practical applications.

1. The laminability of the new composite material makes it ideal for various industrial applications.
2. Researchers are exploring the laminability of different polymers to enhance their structural integrity.
3. Understanding the laminability of metals can significantly impact manufacturing processes.
4. The laminability of the fabric allows it to be easily layered for added insulation.
5. Engineers must consider the laminability of the components when designing the assembly.
