

LAP-WELDED

Meaning: LAP-WELDED refers to a type of joint in metal construction where two overlapping pieces are fused together using welding, creating a strong and secure connection.

1. The lap-welded joints provided a strong and reliable connection for the metal framework.
2. During the inspection, the engineer noted that the lap-welded seams were particularly well-executed.
3. The construction team opted for lap-welded panels to enhance the structural integrity of the building.
4. In the manufacturing process, lap-welded sections are often preferred for their ease of assembly.
5. The lap-welded design not only saved time but also reduced the overall weight of the structure.
