

LARVA

Meaning: Larva: a juvenile form of an insect or other animal that undergoes metamorphosis, typically characterized by a distinct, elongated body and a different morphology from the adult stage.

1. The larva emerged from the egg, wriggling eagerly in search of food.
2. Scientists studied the larva's development to understand the metamorphosis process better.
3. In some species, the larva can grow rapidly, transforming its size within just a few days.
4. The bright coloration of the larva serves as a warning to predators about its toxicity.
5. After a few weeks, the larva found a safe place to pupate and begin its transformation into an adult.
