

LARYNGOSCOPE

Meaning: A laryngoscope is a medical instrument used to visualize the larynx and vocal cords by inserting it into the throat.

1. The doctor carefully used the laryngoscope to examine the patient's vocal cords.
2. During the procedure, the laryngoscope provided a clear view of the airway for the anesthesiologist.
3. Training on the laryngoscope is essential for medical students specializing in otolaryngology.
4. The laryngoscope's light helped illuminate the throat, making it easier to diagnose the issue.
5. After inserting the laryngoscope, the surgeon was able to identify the cause of the patient's breathing difficulty.
