

LATENCY

Meaning: Latency refers to the delay or time interval between a request and the response in a system, often measured in terms of network performance or processing efficiency.

1. High latency in the network can lead to frustrating delays during online gaming.
2. The researchers measured the latency of the system to determine its efficiency.
3. Reducing latency is crucial for real-time communication applications like video conferencing.
4. In data processing, latency refers to the time it takes for a request to be completed.
5. Users often complain about latency issues when streaming high-definition videos.
