

LEES

Meaning: Lees are the sediment consisting of dead yeast cells and other particles that settle at the bottom of a fermentation vessel after the production of wine.

1. After the wine was poured, the lees settled at the bottom of the barrel.
2. The winemaker decided to leave the wine on the lees for several months to enhance its flavor.
3. He carefully filtered the liquid, ensuring that no lees were present in the final product.
4. The thick layer of lees at the bottom indicated that the fermentation process had been vigorous.
5. Many brewers appreciate the complexity that aged lees can bring to their craft beers.
6. The winemaker carefully inspected the lees to determine the best time for racking the wine.
7. After the fermentation process, a layer of sediment known as lees formed at the bottom of the barrel.
8. Some brewers leave their beer in contact with the lees for added flavor and complexity.
9. The presence of lees can affect the clarity of the wine, making it important to filter before bottling.
10. Many chefs use lees from white wine to enhance the flavor of sauces and risottos.
