

# LENTICEL

*Meaning: Lenticel: A small, porous structure on the surface of stems and bark that facilitates gas exchange in plants.*

1. The lenticels on the tree bark allowed for gas exchange, vital for the plant's respiration.
2. In some species, lenticels appear as small, corky spots that can be seen on the surface of stems.
3. The researcher studied the structure and function of lenticels to better understand their role in plant physiology.
4. Lenticels are crucial for the survival of woody plants during periods of rapid growth.
5. As the tree aged, the lenticels became more pronounced, indicating increased metabolic activity.
