

LIMICOLINE

Meaning: LIMICOLINE refers to a group of birds, particularly shorebirds, that inhabit or frequent wetlands and coastal areas, often wading in shallow waters.

1. The limicoline species were observed wading through the shallow waters of the estuary.
2. Researchers focused on the limicoline birds that migrate along the coast every spring.
3. Understanding limicoline habitats is crucial for the conservation of these shorebird populations.
4. The limicoline adaptation to wetland environments allows them to thrive where other species cannot.
5. During the field study, we documented several limicoline species foraging for food in the mudflats.
