

LIMPET

Meaning: A limpet is a marine mollusk with a conical shell that clings tightly to rocks in tidal zones.

1. The limpet clung tightly to the rock, resisting the waves crashing against it.
2. Scientists study the limpet's unique shell structure for insights into natural engineering.
3. During low tide, we found dozens of limpets scattered across the tidal pools.
4. The limpet's ability to adhere to surfaces makes it a fascinating subject for marine biology.
5. As we explored the shoreline, the colorful limpets added a vibrant touch to the rocky landscape.
