

LIMULE

Meaning: Limule: a marine arthropod, commonly known as a horseshoe crab, characterized by its hard shell and ancient lineage, often studied for its blue blood used in medical testing.

1. The limule, often referred to as a horseshoe crab, has existed for over 450 million years.
2. Scientists study the limule's unique blue blood for its medical applications in detecting bacterial contamination.
3. During the full moon, limules can be seen migrating to shore for their annual spawning ritual.
4. Despite its name, the limule is more closely related to spiders and scorpions than to crabs.
5. Conservation efforts are crucial to protect the limule's habitat from coastal development and pollution.
