

LITHIASIS

Meaning: Lithiasis is the formation of stones or calculi, typically in the kidneys or urinary tract, which can cause pain and require medical treatment.

1. Lithiasis can lead to severe pain and discomfort if not treated promptly.
2. The patient's diagnosis of lithiasis required a surgical intervention to prevent complications.
3. In some cases, dietary changes can help manage lithiasis and reduce the formation of stones.
4. Doctors often recommend increased hydration as a preventive measure against lithiasis.
5. Understanding the symptoms of lithiasis is crucial for timely diagnosis and treatment.
