

LITHOTRIPSY

Meaning: Lithotripsy is a medical procedure that uses shock waves to break down kidney stones into smaller pieces that can be passed more easily.

1. Lithotripsy is often recommended as a non-invasive treatment for kidney stones.
2. The patient was relieved when the doctor explained that lithotripsy would break down the stones without the need for surgery.
3. Advancements in lithotripsy technology have significantly improved the effectiveness of kidney stone management.
4. After undergoing lithotripsy, many patients experience minimal discomfort and a quicker recovery time.
5. The success rate of lithotripsy varies depending on the size and composition of the stones being treated.
