LITHOTRIPTIC

Meaning: Lithotriptic refers to a medical procedure or technology designed to break down kidney stones into smaller fragments for easier passage and treatment.

1. The lithotriptic procedure effectively shattered the kidney stones, alleviating the patient's pain.

2. Advancements in lithotriptic technology have significantly improved the success rates of kidney stone treatments.

3. Doctors often recommend lithotriptic methods for patients with large or painful stones that cannot be passed naturally.

4. The lithotriptic shock waves are precisely targeted to minimize damage to surrounding tissues.

5. Understanding the lithotriptic process is essential for patients considering this non-invasive option for stone removal.
