

LUNGLESS

Meaning: Lungless refers to organisms, such as certain salamanders or fish, that do not possess lungs and instead respire through their skin or other means.

1. Some species of lungless salamanders rely on their skin for respiration.
2. The discovery of a lungless fish in a remote lake surprised marine biologists.
3. Researchers are studying lungless frogs to understand their unique adaptations to breathing.
4. Lungless mammals are extremely rare, making their study particularly fascinating.
5. The concept of being lungless challenges our traditional understanding of vertebrate respiration.
