

MACRODIAGONAL

Meaning: Macrodiagonal refers to a significant or overarching diagonal that connects non-adjacent vertices in a large polygon or is used in a broad approach to data analysis.

1. The macrodiagonal approach to data analysis significantly improves the accuracy of predictions.
2. In the context of geometry, a macrodiagonal connects two non-adjacent vertices in a large polygon.
3. Researchers utilized the macrodiagonal method to assess the overall trends in the dataset.
4. The macrodiagonal analysis revealed patterns that were previously overlooked in the smaller scale studies.
5. Understanding the macrodiagonal structure of the problem can lead to more efficient solutions.
