

MAGNETISM

Meaning: Magnetism is a physical phenomenon produced by the motion of electric charge, resulting in attractive or repulsive forces between objects, particularly affecting certain materials and their applications in technology.

1. Magnetism is a fundamental force that affects various materials and their interactions.
2. The scientist explained how magnetism plays a crucial role in modern technology, including electric motors and generators.
3. As a child, I was fascinated by the way magnetism could lift heavy objects with ease.
4. The study of magnetism has led to significant advancements in fields like medicine and telecommunications.
5. Her passion for physics was ignited by a simple experiment demonstrating the principles of magnetism.
