

# MAGNETIZABLE

*Meaning: Magnetizable refers to the ability of certain materials, particularly metals, to become magnetized under specific conditions.*

1. The scientist explained how certain metals are magnetizable under specific conditions.
2. In the experiment, we discovered that the alloy was highly magnetizable when cooled to low temperatures.
3. Understanding which materials are magnetizable is crucial for developing effective electromagnetic devices.
4. The engineer selected a magnetizable material to enhance the efficiency of the motor design.
5. Research into magnetizable substances has led to advancements in data storage technologies.
