

MAGNETOGRAPH

Meaning: A magnetograph is an instrument used to measure and map magnetic fields, particularly in solar phenomena.

1. The magnetograph is an essential tool for studying solar magnetic fields.
2. Researchers used a magnetograph to capture detailed images of sunspots.
3. By analyzing data from the magnetograph, scientists can better predict solar storms.
4. The latest advancements in magnetograph technology have improved our understanding of astrophysics.
5. Astronomers often rely on magnetographs to observe the magnetic activity of distant stars.
