

# MARCASITE

*Meaning: Marcasite is a mineral composed of iron sulfide, often used in jewelry for its metallic luster and resemblance to pyrite.*

1. Marcasite is often confused with pyrite due to its similar appearance.
2. Jewelry adorned with marcasite has a unique vintage charm that appeals to many collectors.
3. The mineral marcasite can be found in various geological environments, often forming in sedimentary rocks.
4. Craftspeople appreciate marcasite for its brilliant luster and ability to complement other gemstones.
5. Despite its beauty, marcasite must be handled carefully as it can tarnish over time.
