

MARLITIC

Meaning: Marlitic refers to a type of soil or sediment that contains marl, characterized by a mixture of clay, calcium carbonate, and other minerals, often enhancing nutrient retention and indicating specific geological conditions.

1. The marlitic layers found in the geological survey indicate a significant shift in sedimentation patterns.
2. Researchers noted that the marlitic composition of the soil contributed to enhanced nutrient retention.
3. During the excavation, they discovered marlitic deposits that dated back to the late Jurassic period.
4. The marlitic characteristics of the rock samples suggested a rich history of marine influences.
5. Geologists often study marlitic formations to better understand ancient environmental conditions.
