

MASSETERINE

Meaning: Maseterine refers to the muscles associated with the jaw, particularly the masseter muscles, which are essential for chewing in mammals.

1. The maseterine muscles are crucial for the powerful chewing motion in mammals.
2. In some species, the size of the maseterine can indicate dietary habits and lifestyle.
3. Researchers studied the maseterine structure to understand evolutionary adaptations in herbivores.
4. The athlete developed strong maseterine muscles through intense jaw exercises.
5. Understanding the function of the maseterine can help in dental and orthodontic treatments.
