MASTOID

Meaning: Mastoid refers to a bony prominence located behind the ear, part of the temporal bone, that can be involved in infections and other medical conditions.

1. The mastoid process is located just behind the ear and is part of the temporal bone.
2. Infection of the mastoid can lead to serious complications if not treated promptly.
3. Surgeons may need to remove part of the mastoid if a tumor is detected in that area.
4. The doctor examined the patient's mastoid for signs of swelling or tenderness.
5. Anatomical studies often focus on the mastoid region due to its complex structure.
